SUMMARY

Senior Data Engineer with 7+ years of experience designing scalable cloud data platforms, modern ELT architectures, and analytics-ready data models. Specialized in Snowflake, dbt Core, Python automation, and CI/CD-driven data engineering workflows. Proven track record delivering enterprise-grade data solutions that enable analytics, AI initiatives, and business intelligence through high-quality, governed, and performance-optimized datasets. Strong technical leader experienced in mentoring engineers, establishing best practices, and aligning data architecture with business strategy.

EXPERIENCE

Insperty, Senior Data Engineer

2024 - Present

Data Architecture & Modeling Leadership - Designed enterprise Snowflake data platform supporting analytics, reporting, and AI initiatives across HR datasets exceeding 1TB daily processing. - Architected scalable dbt transformation layers implementing staging, intermediate, and marts aligned with dimensional modeling best practices. - Delivered analytics-ready data products with strong lineage, documentation, and governance standards.

Transformation Engineering (dbt Core) - Developed 50+ production dbt models with automated testing, documentation, and CI/CD integration. - Implemented incremental processing strategies improving pipeline efficiency and cost performance. - Standardized dbt development practices across engineering teams.

Automation & Data Quality Engineering - Built Python-based automation for data validation, pipeline monitoring, and performance optimization. - Implemented enterprise data quality scorecards, anomaly detection, and freshness monitoring.

Snowflake Optimization & Governance - Optimized warehouse performance using clustering strategies, query profiling, and cost governance frameworks. - Reduced compute costs while improving analytical performance through model optimization.

CI/CD & DevOps Enablement - Designed automated deployment pipelines using Azure DevOps and GitHub Actions for dbt and Snowflake workloads. - Enabled reproducible deployments, automated testing, and zero-downtime releases.

Leadership & Mentorship - Mentored engineers in dbt modeling, Snowflake optimization, and CI/CD practices. - Led architecture discussions aligning data engineering with business analytics needs.

NetImpact / ASRC, Data Engineer

2022 - 2023

- Designed Azure Data Factory pipelines integrating structured and semi-structured enterprise data.
- Built dimensional warehouse models supporting enterprise reporting and operational analytics.
- Implemented CI/CD deployment automation and schema versioning via Azure DevOps.
- Embedded data quality validation and anomaly detection frameworks improving reliability and trust in analytics.
- Supported business intelligence initiatives through curated analytical datasets and dashboards.

American Structure, Data Developer / DBA

2019 - 2021

- Built enterprise ETL pipelines using SSIS and advanced SQL for centralized reporting warehouse.
- Designed dimensional models enabling self-service analytics.
- Optimized database performance, indexing strategies, and execution plans.
- Delivered reporting solutions via SSRS supporting operational decision-making.

Carter Logistics, Junior Data Developer

2016 - 2018

- Developed ETL pipelines and reporting datasets for logistics analytics.

· Supported database administration, performance tuning, and operational reporting.

EDUCATION

Mekelle University
B.Sc. Engineering

Eleven Fifty Academy
Software Development Certificate

Mesa Community College
Computer Programming Certificate

LICENSES & CERTIFICATIONS

Azure Data Engineer Associate

dbt Fundamentals Certification

SKILLS

Advanced SQL development • performance tuning • query optimization • Dimensional modeling (Kimball) • SCD Types 1–3 • star/snowflake schemas • ELT architecture design (RAW → STG → INT → MART) • dbt Core: advanced modeling • testing • documentation
